---

The “c.MET05 Policy Colloquia” are interactive meetings among a **limited number of scholars** and **policy makers**. During the Colloquia open brainstorming is encouraged with the goal of developing research lines that can be useful for policy making, citizens and societies. The main topics of interest are the same which characterize the work of c.MET05 in the field of applied economic and policy studies: **industrial development, industry-market-government, industrial policy, local and international industry, internationalization of industries and territories, local development, innovation...**

The discussion intends to benefit from the analysis of international and local experiences carried out in a comparative perspective. Young and senior participants coming from different regions and countries offer an essential contribute to the success of the discussion.
